## RE-TERMINATION KITS

A range of kits for the emergency repair of underwater cables and terminations complimenting other accessories available from the company.

Supplied in a tough weather proof case, the kits comprise polyurethane twin-packs, cleaning materials, disposable moulds, abrasive tape, release agents, pre-treatment solution, brushes, adhesive tape and disposable protective gloves. A full set of instructions and re-ordering information completes the kit. Three standard versions of the kit are available, each to suit the principle materials that the kits will be used upon.

Other kits are available with primers to suit various cable jacket materials and re-useable mould tools etc. Please contact Scorpion Oceanics for details.

Simply called "The Re-Termination Kit", it contains everything required to give a professional and functional re-termination covering a range of cable diameters and connector types, on-site or wherever the cable is located.

Scorpion Oceanics will also carry out mouldings on-site if required or at our extensively equipped workshops in Gt. Chesterford.

### RETERMKIT00

Polyurethane to Polyurethane moulding

### RETERMKIT01

Polyurethane to Metal

### RETERMKIT02

Polyurethane to Neoprene and Thermo-Plastic Rubber
